not jell or harden and why it some-times turns granular and at other Denver Field and Farm. times it is tough. Sometimes again we boast of having splendid lick with our Jelly. Now the making of Jelly does not depend upon luck or There are principles underlying even the making of jetties. The jettying principle in fruits is known an pectin. Most fruits contain it in greater or iem quantities. This pectin is capable of using up a certain amount of sugar. This is largely where our trouble lies. Too little sugar gives a touch jelly and too much sugar causes it to refuse to jell

When this occurs no amount of cooking can restify it and more sugar servance of such a day can be used only adds to the trouble. The only to stimulate interest in road work remedy is more pectin; hence we must sed more fruit jures. More july is spoiled by the addition of two much, of the country and the sity. It would say at than by too little. No doubt not or difficult to offer objections a this is due to the fact that we blindly follow our grandmother's rule of roads only as a means of construct measure for measure. Whether or or improving roads, but such an not pectin is present in a fruit can be readily ascertained by the housewife by a very simile test. Put a small quantity of fruit juice, say two tablespoons, in a small glass; add an equal highway problems between the diffe quantity of ethyl nicohol-ask at the ent classes of people who use I

If peetly is present a gentinous mass will appear to the liquid which may be gathered up with a spoon. The housekeeper will discover that different proportions of peetin; hence doubtless one reason for so many varying results in making july. The proportion or sugar should be gov-erned accordingly. Another effect of the addition of too much sugar is the erystallizing of the jelly and on this to The Test of Time. Many Albuquer point the uncertaint, arises, for fruits to The Test of Time. Many Albuquer very and that purchased on the maror own mardens.
